DRPATCH EYEPATCHES ARE MADE IN CANADA | PATENT PENDING.
783 SHEFFORD, BROMONT, QUÉBEC, J2L 1C4 CANADA

Eye-care professionals recommend DrPatch

“DrPatch eyepatches have significant advantages over other types of patches. They’re smaller and are not placed on the skin, but rather on the glasses, without damaging them. Furthermore, they’re attractive. For these reasons, I plan to recommend them to my patients.”
Dr Patrick Hamel, ophthalmologist, Sainte Justine Hospital.

“DrPatch reusable eyepatches make life easy for optometrists and patients alike. The fact that the product is adhesive and reusable enables you to alternate the occlusion from one eye to the other. What’s more, the illustrations are very attractive, so children really like wearing these eyepatches in public. What a wonderful initiative on the part of DrPatch!”
Dr Jean-Pierre Lagacé, optometrist, Montreal.

Medical problems that could require an eyepatch

Strabismus

A condition also known as being “cross-eyed,” which is found among young children and is characterized by an absence of coordination between the eyes causing one eye or both to look in different directions.

Amblyopia

A vision problem better known as “lazy eye,” amblyopia is characterized by poor or blurred vision in an eye. It is caused by problems in the development of the brain and not the eye itself. The problem is fairly common, affecting 3% to 5% of children. The earlier amblyopia is treated, the greater the chances of recovery.

The benefits of the DrPatch eyepatch

- Adaptable to all types of eyeglasses and all shapes of lenses
- Easy to cut with good adhesion
- Reusable: easy to remove and reinstall
- Comfortable: no rubbing against the skin or the eye
- No risk to lenses
- Inspires confidence, especially for children, attracting the support of friends
- Helpful to parents, who see their child happily take part in the treatment
- Economical compared to other eyepatches on the market

Ask your doctor if the DrPatch eyepatch is appropriate for your treatment or that of your child.

The innovative eyepatch that's a delight to wear!
